PROFESSIONAL SUMMARY

Full Stack Software Engineer with 4+ years of experience designing, developing, and maintaining scalable enterprise applications using Java, Spring Boot, Angular, React, JavaScript, TypeScript, and MySQL. Experienced in building RESTful APIs, scalable backend services, responsive front-end applications, SQL optimization, automated testing, and Agile software development. Proven ability to improve application performance by 30%, develop secure production-ready software, and deliver high-quality solutions throughout the Software Development Life Cycle (SDLC).

TECHNICAL SKILLS

Programming Languages: Java, JavaScript, TypeScript, Python, SQL

Backend Technologies: Spring Framework, ASP.NET, Spring Data JPA, RESTful APIs, Microservices, Object-Oriented Programming (OOP), Design Patterns

Frontend Technologies: Angular, AngularJS, React, HTML5, CSS3

Databases: MySQL, SQL, Database Design, Query Optimization

Testing: JUnit, Mockito, Jasmine, Unit Testing, Integration Testing, Test-Driven Development (TDD)

Tools: Git, Maven, CI/CD, REST API Development, Agile/Scrum

Core Concepts: Data Structures, Algorithms, Design Patterns, Secure Coding, Code Reviews, Software Development Life Cycle (SDLC), API Integration

PROFESSIONAL EXPERIENCE

React Developer

Jan 2025 – Present

Highmark Health

- Developed scalable and responsive single-page applications (SPAs) using **React.js**, JavaScript (ES6+), HTML5, CSS3, and TypeScript to deliver modern healthcare web applications.
- Built reusable React components and custom hooks, improving code maintainability, consistency, and accelerating feature development across multiple modules.
- Integrated frontend applications with secure RESTful APIs, implementing asynchronous data fetching, error handling, and state management for seamless user experiences.
- Collaborated with UX/UI designers, backend engineers, product owners, and QA teams in Agile Scrum environments to deliver high-quality software within sprint timelines.
- Optimized application performance using React performance best practices including lazy loading, memoization, code splitting, and efficient component rendering.
- Implemented responsive and accessible user interfaces following HTML5, CSS3, WCAG accessibility guidelines, and cross-browser compatibility standards.
- Participated in peer code reviews, debugging, and production issue resolution while following secure coding standards and software engineering best practices.
- Developed unit tests for React components using Jest and React Testing Library to improve application reliability and maintain code quality.
- Utilized Git for version control and contributed to CI/CD deployment pipelines, ensuring smooth integration, testing, and release processes.

Software Engineer

November 2020 – October 2023

Cigniti Technologies, Hyderabad, India

- Developed and maintained scalable enterprise web applications using Java, React, and MySQL, supporting thousands of active users while maintaining **99.9% application availability**.
- Designed, developed, and integrated secure RESTful APIs with robust validation, exception handling, and authentication, enabling seamless communication between frontend and backend systems.

- Built modular, reusable, and testable software components following object-oriented design principles, improving code maintainability and reducing future development effort.
- Optimized SQL queries and Spring Data JPA repositories, improving application performance by approximately **30%** while reducing database response time.
- Implemented comprehensive unit and integration testing using JUnit, Mockito, and Jasmine, improving application reliability and reducing production defects.
- Collaborated with product owners, QA engineers, UI/UX designers, and developers in Agile Scrum teams to deliver high-quality software within sprint timelines.
- Managed Maven build configurations, project dependencies, deployment processes, and production troubleshooting throughout the software development lifecycle.
- Produced technical documentation for REST APIs, deployment workflows, and system architecture to improve knowledge sharing and accelerate onboarding of new developers.

PROJECTS

Online Ordering Application | *Angular, Java Spring Boot, Microservices, MySQL*

Live Demo

- Built a full-featured food ordering platform using Angular with online ordering, secure payment integration, responsive UI, and real-time order tracking functionality.
- Translated business requirements into scalable application features while improving overall user experience through modern frontend development practices.
- Deployed and managed application infrastructure on AWS EC2 and Microsoft Azure, improving application availability and supporting scalable production deployments.
- Collaborated with a cross-functional Agile team including 5+ iOS developers to deliver consistent functionality across multiple platforms.
- Enhanced application responsiveness through performance optimization, reusable UI components, and responsive web design techniques for mobile and desktop users.

Music Streaming Application | *Angular 21, Java Spring Boot, Microservices, MySQL*

Live Demo

- Developed a full-stack music streaming application using **Angular** for the frontend and **Java Spring Boot** for backend services, enabling users to browse playlists, manage songs, and stream audio content.
- Designed and implemented scalable **RESTful APIs** using Spring Boot, Spring Data JPA, Hibernate, and MySQL to support playlist management, song operations, and application data processing.
- Built a microservices-based backend architecture by separating business functionalities into independent services, improving scalability, maintainability, and future deployment flexibility.
- Created reusable Angular components with TypeScript, Angular Services, Routing, and Reactive Programming patterns to deliver a responsive and user-friendly music experience.
- Integrated frontend and backend communication using HTTP Client and REST APIs with proper exception handling, validation, and structured API responses.
- Implemented database persistence using MySQL and JPA entity relationships for managing users, playlists, songs, and application metadata.
- Deployed the Angular application using Vercel and followed modern development practices including Git version control, Agile workflows, and modular application design.

EDUCATION

Bowling Green State University

Dec 2025

Master of Science in Computer Science

Bowling Green, Ohio

BV Raju Institute of Technology (BVRIT)

2020

Bachelor of Technology in Computer Science

Hyderabad, India
